### Section : General Aptitude

- Q.1** In the given figure, the numbers associated with the rectangle, triangle, and ellipse are 1, 2, and 3, respectively. Which one among the given options is the most appropriate combination of P, Q, and R ?

- Options**
- A.  $P = 6; Q = 5; R = 3$
  - B.  $P = 5; Q = 3; R = 6$
  - C.  $P = 5; Q = 6; R = 3$
  - D.  $P = 3; Q = 6; R = 6$

Question Type : **MCQ**  
Question ID : **142276865**  
Status : **Answered**  
Chosen Option : **A**

**Q.2** Column-I has statements made by Shanthala; and, Column-II has responses given by Kanishk.

| Column-I |  | Column-II |  |
|----------|--|-----------|--|
| P.       | This house is in a mess.                     | 1.        | Alright, I won't bring it up during our conversations. |
| Q.       | I am not happy with the marks given to me.   | 2.        | Well, you can easily look it up.                       |
| R.       | Politics is a subject I avoid talking about. | 3.        | No problem, let me clear it up for you.                |
| S.       | I don't know what this word means.           | 4.        | Don't worry, I will take it up with your teacher.      |

Identify the option that has the correct match between Column-I and Column-II.

Options

- A. P – 3; Q – 4; R – 1; S – 2
- B. P – 2; Q – 3; R – 1; S – 4
- C. P – 1; Q – 2; R – 4; S – 3
- D. P – 4; Q – 1; R – 2; S – 3

Chosen Option : **A**

**Q.3** A rectangle has a length  $L$  and a width  $W$ , where  $L > W$ . If the width,  $W$ , is increased by 10%, which one of the following statements is correct for all values of  $L$  and  $W$ ?

Options

- A. Perimeter increases by 10%.
- B. Area increases by 10%.
- C. The rectangle becomes a square.
- D. Length of the diagonals increases by 10%.

Status : **Answered**

Chosen Option : **B**

**Q.4** A regular dodecagon (12-sided regular polygon) is inscribed in a circle of radius  $r$  cm as shown in the figure. The side of the dodecagon is  $d$  cm. All the triangles (numbered 1 to 12) in the figure are used to form squares of side  $r$  cm and each numbered triangle is used only once to form a square.

The number of squares that can be formed and the number of triangles required to form each square, respectively, are:

Note: The figure shown is representative.

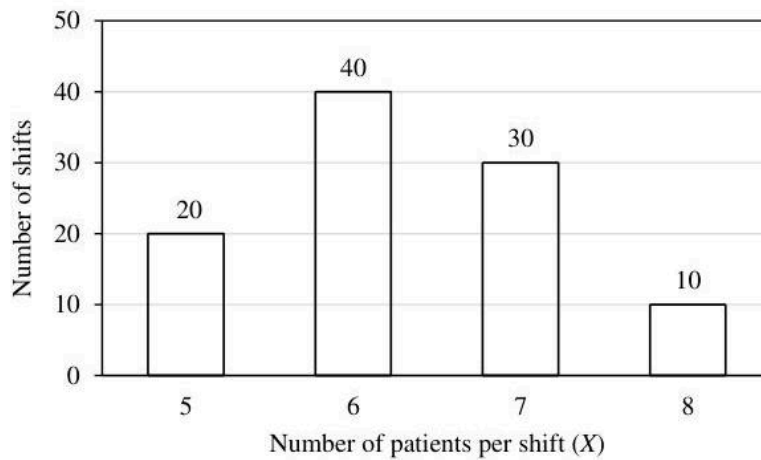

- Options
- A. 4; 3
  - B. 3; 4
  - C. 3; 3
  - D. 3; 2

Question Type : **MCQ**  
 Question ID : **142276869**  
 Status : **Answered**  
 Chosen Option : **D**

- Q.5** The number of patients per shift ( $X$ ) consulting Dr. Gita in her past 100 shifts is shown in the figure. If the amount she earns is ₹  $1000(X - 0.2)$ , what is the average amount (in ₹) she has earned per shift in the past 100 shifts?

Note: The figure shown is representative.

Options

- A. 6,000
- B. 6,500
- C. 6,100
- D. 6,300

- Q.6** Weight of a person can be expressed as a function of their age. The function usually varies from person to person. Suppose this function is identical for two brothers, and it monotonically increases till the age of 50 years and then it monotonically decreases. Let  $a_1$  and  $a_2$  (in years) denote the ages of the brothers and  $a_1 < a_2$ .

Which one of the following statements is correct about their age on the day when they attain the same weight?

Options

- A. Either  $a_1 = 50$  or  $a_2 = 50$
- B.  $a_1 < a_2 < 50$
- C.  $50 < a_1 < a_2$
- D.  $a_1 < 50 < a_2$

**Q.1** Consider designing a linear classifier

$$y = \text{sign}(f(x; w, b)), \quad f(x; w, b) = w^T x + b$$

on a dataset  $D = \{(x_1, y_1), (x_2, y_2), \dots, (x_N, y_N)\}$ ,  $x_i \in \mathbb{R}^d$ ,  $y_i \in \{+1, -1\}$ ,  $i = 1, 2, \dots, N$ . Recall that the sign function outputs +1 if the argument is positive, and -1 if the argument is non-positive. The parameters  $w$  and  $b$  are updated as per the following training algorithm:

$$w_{\text{new}} = w_{\text{old}} + y_n x_n, \quad b_{\text{new}} = b_{\text{old}} + y_n$$

whenever  $\text{sign}(f(x_n; w_{\text{old}}, b_{\text{old}})) \neq y_n$ . In other words, whenever the classifier wrongly predicts a sample  $(x_n, y_n)$  from the dataset,  $w_{\text{old}}$  gets updated to  $w_{\text{new}}$ , and likewise  $b_{\text{old}}$  gets updated to  $b_{\text{new}}$ . Consider the case  $(x_n, +1)$ ,  $f(x_n; w_{\text{old}}, b_{\text{old}}) < 0$ . Then

- Options
- A.  $f(x_n; w_{\text{new}}, b_{\text{new}}) < f(x_n; w_{\text{old}}, b_{\text{old}})$
  - B.  $y_n f(x_n; w_{\text{old}}, b_{\text{old}}) > 1$
  - C.  $f(x_n; w_{\text{new}}, b_{\text{new}}) = f(x_n; w_{\text{old}}, b_{\text{old}})$
  - D.  $f(x_n; w_{\text{new}}, b_{\text{new}}) > f(x_n; w_{\text{old}}, b_{\text{old}})$

**Q.10** Consider the following three relations:

Car (model, year, serial, color)

Make (maker, model)

Own (owner, serial)

A tuple in Car represents a specific car of a given model, made in a given year, with a serial number and a color. A tuple in Make specifies that a maker company makes cars of a certain model. A tuple in Own specifies that an owner owns the car with a given serial number. Keys are underlined; (owner, serial) together form key for Own. ( $\bowtie$  denotes natural join)

$\pi_{\text{owner}}(\text{Own} \bowtie (\sigma_{\text{color}=\text{"red"}}(\text{Car} \bowtie (\sigma_{\text{maker}=\text{"ABC"}}\text{Make}))))$

Which one of the following options describes what the above expression computes?

Options

- A. All red cars made by ABC
- B. All owners of a red car made by ABC
- C. All owners of a red car, a car made by ABC, or a red car made by ABC
- D. All owners of more than one car, where at least one car is red and made by ABC

**Q.31** Consider a two-class problem in  $\mathbb{R}^d$  with class labels *red* and *green*. Let  $\mu_{red}$  and  $\mu_{green}$  be the means of the two classes. Given test sample  $x \in \mathbb{R}^d$ , a classifier calculates the squared Euclidean distance (denoted by  $\|\cdot\|^2$ ) between  $x$  and the means of the two classes and assigns the class label that the sample  $x$  is closest to. That is, the classifier computes

$$f(x) = \|\mu_{red} - x\|^2 - \|\mu_{green} - x\|^2$$

and assigns the label *red* to  $x$  if  $f(x) < 0$ , and *green* otherwise. Which of the following statements is/are correct?

Options A.

The sample  $x = 0$  is assigned the label *green* if  $\|\mu_{red}\| < \|\mu_{green}\|$

B.  $f$  is a linear function of  $x$

C.  $f$  is a quadratic polynomial in  $x$

D.

$f(x) = w^\top x + b$ , where  $w$  and  $b$  are functions of  $\mu_{red}$  and  $\mu_{green}$
